CARGO ON BY TRANS.EU

Freight Order Management:
From creation up to communication and freight order acceptance

All information is centralized for better access, sharing and compliance

**The best allocation engine on the European market ensuring speed and flexibility**

Access to transport capacity at any time in contract or spot modalities

Flawless communication with internal and external stakeholders

HOW IT WORKS?

START

Freights creation
via import (csv)
or integration (API)

Allocation
Based on the freight data, asset type, cost and route

ALLOCATION ENGINE

Contracts
Trusted carriers working under contract

Groups
Small groups of trusted carriers for specific lanes or transport types

Private Exchange
Dedicated to your trusted carriers only

Freight Exchange
SPOT in Open Market with direct access to thousands of transport companies

Automated

Human driven negotiation
with multilingual Messenger

ACCEPTANCE

**Carrier information
Order terms
Conditions terms
Documentation**

END

BENEFITS

- **3% savings on transport spend minimum:** Automated Carrier Allocation engine ensures the transport spend is under control

- **70% gain on process time:** productivity gain through digital processes, integration with ERPs or TMS cloud and shared visibility

- **80% gain on speed of communication:** sequential and simultaneous allocations enable to find solutions in due time and manner

- **Flexible access to capacity:** access to one of the widest Carriers and Forwarders network in Europe with the biggest international transport capacity

- **Market fit for any freight procurement policy:** centralized information and documentation

- **Digitalization pace settable:** from manual to recommended or fully automated allocation

The FREIGHTS module is a solution for comprehensive freight order handling

Our solution encompasses: freight order creation, price negotiation, documentation and order terms acceptance
