

# New era of bulk material handling – efficiency, control and cost savings

CargoON supports the transformation of bulk material transport by offering modern tools that automate and streamline key logistics processes. Our solutions allow you to have full control over each shipment, optimize costs and increase the efficiency of your operations. Regardless of the scale of operations, CargoON allows you to quickly adapt to dynamic changes in the market and achieve a new level of flexibility in supply chain management.

## What do you gain?

Here are the key features that will help you improve your transport management:

### Multifreight - one order, multiple shipments

Save time and resources! Multifreight allows you to publish a single offer covering multiple shipments - just specify the amount of goods or the number of shipments, and we will take care of the rest. With Multifreight, you can effectively manage all your orders in one place and negotiate with carriers faster and easier.

#### Example:

*"If you need to deliver 500 tons of grain to several locations, CargoON allows you to consolidate the entire operation into a single order - minimizing paperwork and time spent on coordination."*

### Cost transparency is essential!

The payment per ton function ensures accurate settlement based on the actual tonnage of materials transported. As a result, agro companies pay for exactly what was transported, avoiding inaccuracies in settlements and better controlling expenses, especially with variable load volumes.

#### Example:

*"With this tool, the value of the order is automatically updated based on the exact weight of the load reported from the operation sites, eliminating the risk of unforeseen expenses."*

## Transit Time - timeliness comes first

Transit Time is a parameter that allows you to accurately determine the time it takes to deliver goods from the place of loading to the place of unloading. With CargoON, customers can easily determine the maximum transit time in a freight offer. This tool allows close monitoring of deadlines, which minimizes the risk of delays and ensures greater operational efficiency.

### Example:

*"By specifying a maximum transit time, you are assured that goods such as grains or fertilizers will arrive on time, which is crucial for their quality and on-time delivery."*

## Vehicle and load specification - precision and compliance with standards

Do you need specific body types or certification? Now it's easy! Our system allows you to select the appropriate vehicle parameters (e.g. dump truck type, door type) and required certifications (e.g. Qualimat, TASC) to ensure full regulatory compliance and safety of your shipments.

### Example:

*"With this feature, you can be sure that all shipments meet not only local regulations, but also specific industry requirements, such as GMP+, Qualimat, TASC for the transport of feed and grain."*

## Record weights and precise settlements

Thanks to the advanced features of CargoON, companies can easily record the weights of transported goods within each order, which they previously did outside the system, e.g. in Excel. CargoON supports this process by allowing the aggregation of weights within Multifreight and the accurate calculation of the final value of the order based on the entered data. Moreover, our system automatically calculates the final value of the order based on the actual weight of the load, which allows for precise settlements between carriers and transport companies.

### Example:

*By recording the weight of the load in CargoON, the transport company can accurately summarize the costs, and the calculation based on the actual data in the system ensures accurate settlement. When carrying 200 tons of bulk material, the system automatically calculates the total cost based on the actual weight, ensuring full transparency and accuracy in settlement.*

# Why choose CargoON?

1

## EFFICIENCY AND TRANSPARENCY:

- Optimize your logistics processes with Multifreight and payment per ton.
- Easily manage multiple shipments within a single order – check how many shipments are already allocated, completed, and how many are still pending.
- Less time for paperwork, more time for business development.

2

## SAFETY AND COMPLIANCE:

- Ensure transport safety with Transit Time, which accurately determines the maximum transport time, minimizing the risk of delays. Precise delivery planning allows for better transport management, especially for seasonal and time-sensitive goods.
- The ability to precisely define vehicle requirements and certification ensures that each shipment meets the necessary safety and quality standards, ensuring full compliance with industry regulations.

3

## FLEXIBILITY AND CUSTOMIZATION:

- Tailor transportation to your needs with Multifreight, settlement per ton and Transit Time. You can precisely set delivery time intervals, and a flexible approach to rates eliminates the need to set fixed freight prices, as was the case previously.
- Accurate vehicle specification and certification requirements ensure even better tailoring to specific needs.
