

BACKHAUL PROCESS

How **CargoON** modules enable end-to-end digitalisation of backhaul?

Pickup creation

1
Retailer places PO to Supplier via EDI/email

2
Supplier prepares the order

Transport planning

3
Supplier confirms the readiness of the order for shipment by publishing the freight via web platform/integration

4
Retailer assignment is performed through the allocation engine (fixed routes)

5
Retailer accepts via web platform/integration and plans/manage transport

6
Retailer allocates fleet/carrier and provides transport data to supplier via web platform /integration

Freights ON

Transport execution

7
Transport milestones are registered via web platform, Apps and Integration

8
All transport documentation is centralised

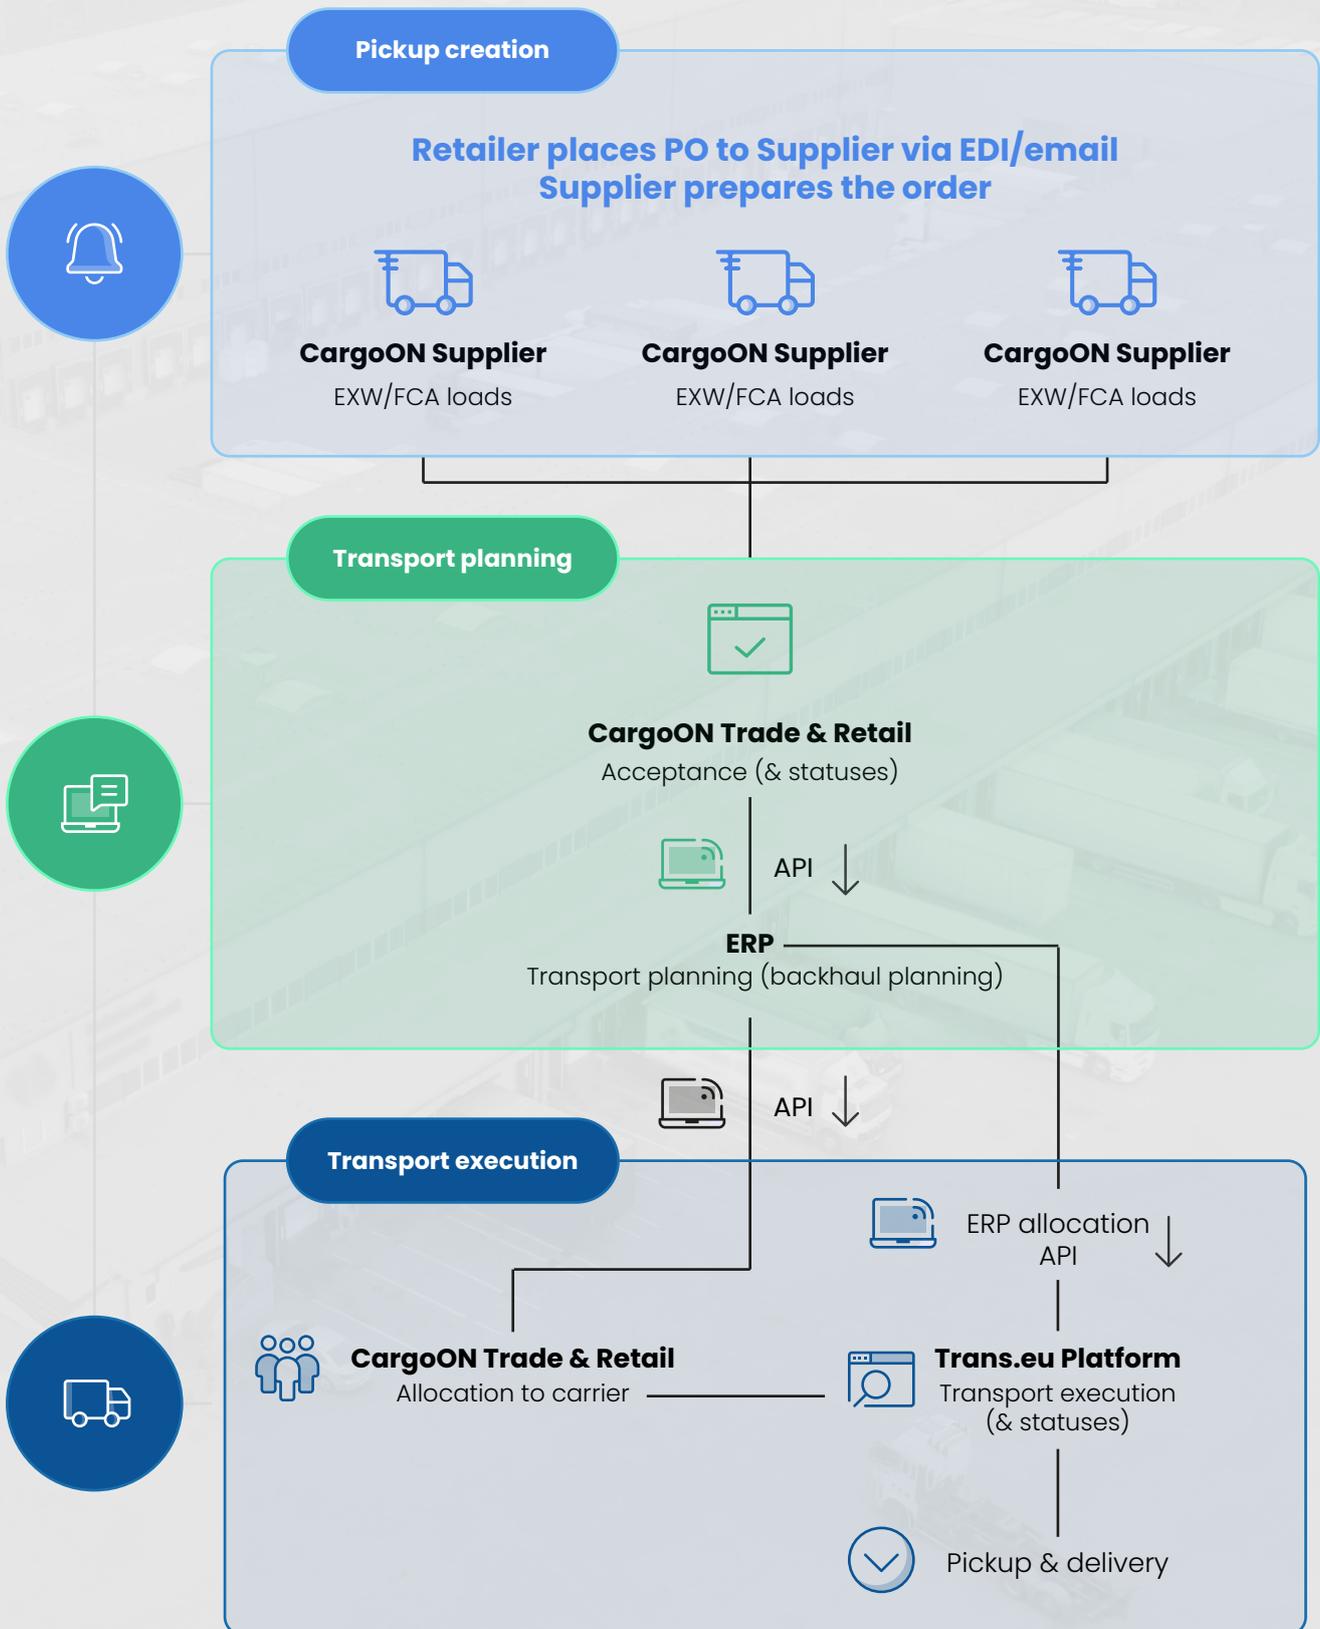

Visibility ON
